

ABSTRACT

The present invention relates to a method of searching for medical information. The method of searching may be executed by one or more computers and comprises the steps of receiving a request for medical information including identification of a subject; transmitting a query to a medical information repository for information pursuant to the request; and receiving a response to the query. The response to the request including information based on the response to the query may be further transmitted after being received. In addition, the response to the query may be de-identified to remove any identifying information therefrom.
